PRODUCT INFORMATION

4901 – PLASTER SINK

Every potter's workshop will have reclaim clay. The problem the potter faces is how to deal with the process of recycling this product. The most common way is to put scraps of dry clay or failed pots into a tub of water to allow the clay to break down. The problem is then to remove the surplus water before re-processing the clay. The normal way is to spread the reclaim on to a porous surface to absorb the surplus water and remove the clay at just the right point to "wedge" the clay back to a plastic form. With the plaster sink the reclaim can be spread within the sink to dry. The walls retain the clay whatever its condition (liquid or not) from spilling. Our plaster sink is the simple and tidy way to control your reclaim.

Dimensions:

Overall

Length: 18.25in
Width: 14in.
Height: 4.25in.

Internal Recess

Length: 16in.
Width: 12in.
Depth: 2.5in.

Weight: 11kg approx.
